

BANKER ARCHITECTURAL

SUSTAINABILITY

As a manufacturer of metal woven wire mesh fabrics, we use very little energy. The process is entirely cold-forming, using machines with the latest variable speed technology. Our plant and offices are illuminated with natural daylight and

energy efficient fluorescent lighting. The wire used at our facility is composed of 80-85% post-consumer and 13-18% pre-consumer recycled steel. Less than 5% of the wire we use becomes scrap and every bit is recycled through a recycling

protocol integrated into every step of Banker's production process. We are proud that our local recycling company is ISO 14001 certified. This guarantees our waste metal is handled in a manner that respects the environment.

Honda's search for an advanced and futuristic appearance for a new Solar Hydrogen Station lead them to Banker Wire, who was able to accommodate with their DS-5 wire mesh. For more information about Honda's Solar Hydrogen Station visit world.honda.com.

LEED CREDITS

Our products can help earn LEED certification by contributing to the following credits in **LEED 2009 for New Construction and Major Renovation**:

SS 8 - LIGHT POLLUTION REDUCTION

Banker Wire mesh can help filter the effects of lighting at night. Mesh screens are particularly useful when used as shading devices for facilities that operate 24 hours a day, such as parking garages and factories.

EA 1 - OPTIMIZE ENERGY PERFORMANCE

Banker Wire mesh can be used as a sunshade on building facades, thus decreasing the amount of air conditioning required to cool spaces.

MR 4 - RECYCLED CONTENT

The post-consumer and pre-consumer recycled content of Banker Wire mesh helps contribute to securing this credit.

MR 5 - REGIONAL MATERIALS

Banker Wire is located in Mukwonago, Wisconsin, which is within a 500-mile radius of such cities as Milwaukee, Chicago, Toronto, Pittsburgh, St. Louis, Detroit, Cleveland, Nashville and Minneapolis/St. Paul. Specifying Banker Wire products for a project within the 500-mile radius will contribute towards the Regional Materials credit.
