

1935 BUGATTI 57SC RESTORATION

Auto Grille Restoration
Indianapolis, Indiana USA

S-25

Jerry Weeks of J. Weeks Metalsmiths Inc., brought Banker Wire another opportunity to take part in a 1935 Bugatti 57SC Torpedo "Competition Model" restoration project. An exhaustive effort to restore this piece of history included locating a woven wire mesh made out of an .063" "Square Brass Wire". This square wire just so happened to be very popular in the 20's and 30's. Banker Wire just completed a Duesenberg project with the same wire but woven in a different wire mesh pattern. Banker Wire was able to crimp the square wire to the correct intercrimp style and spacing as was used in the original period.

Like the Bugatti, woven wire mesh is a classic metal material that doesn't go out of style. From an enormous selection of wire mesh patterns available, Banker Wire can weave a look that remains classic whether being used for restoration or a modern contemporary space.
