

BALTIMORE INNER HARBOR BUILDING

Exterior Railing for Rooftop Fountain
Baltimore, Maryland USA

SZ-3

This rooftop fountain is surrounded by Banker Wire SZ-3 architectural wire mesh and is framed in a simple flat bar frame. The SZ-3 woven wire pattern is very thin, strong and dense. The wire mesh fabric is easily coaxed into taking the radius of the circular platform. The pictures clearly show the actual performance of the SZ-3 as well as what effects the 27% open area actually has on visibility through the wire mesh screen.
