

GREEN LAKE RESIDENCE

Exterior Railing
Green Lake, Wisconsin USA

M44-2

Versatile Spine

The deepest natural lake in Wisconsin, Green Lake covers over 7300 acres and is considered a paradise to many boaters and fishermen alike. The many beautiful homes that cover the 30 miles of shoreline want a railing that offers unobstructed view of the water. Woven wire mesh can offer strength, beauty and a wide range of percent open area configurations so that function does not stand in the way of design. M44-2 woven wire mesh is the perfect railing infill material as it is a strong weave, suits all budgets, and carries a high percent open area to allow the view to be unobstructed.

The M44-2 mesh pattern is framed in the Versatile Spine frame and captured within posts and crossrails provided by R&B Wagner.
