

VALLEY RIVER INN

Decorative Elements for Interior Railing
Eugene, Oregon USA

M22-43

S-12

Looking for a “Big bang for the buck” the interior design team from Ankrom Mosian Architects reached out to Banker Wire for a simple solution. They wanted to dress up the interior space of the Valley River Inn located in Eugene, Oregon but were on a tight budget. Rather than replace the entire railing, they opted for dressing it up with woven wire mesh jewelry.

Individual pieces of M22-43 and S-12 woven wire mesh were manufactured and the edges were “Flow” welded to create a rounded soft edge. Each piece was sent out to be plated in a bright copper finish. The splash of color and mixture of texture adds visual interest to the space.
