

BARN HOME WIRE MESH RAILING

Interior Railing
Niagara Falls, New York, USA

M22-37

Banker Wire's M22-37 decorative wire mesh was framed in a Banker Wire U-edge profile frame and recently integrated into the specification for the stairway railing and airy loft space of an open-concept barn home in the Northeast. Inspired by the rugged look of cattle fences, the wire mesh maintains a refined aesthetic through its streamlined pattern that is on repeat throughout the grand room. Intended to complement the space, the products present a welcomed contrast between the industrial metal and exposed wood construction and hardwood floors throughout the home. The high percent open area of the M22-37 wire mesh offers glimpses of the floating hardwood staircase.
