

## GROVE STATION TOWER

Balcony Railing  
Miami Florida USA

L-64

Grove Station Tower is a luxury apartment and town home high-rise located in the Coconut Grove Neighborhood of Miami, Florida. The tower features modern design and finishes as well as beautiful unobstructed views of the ocean and surrounding city.

Banker Wire's L-64 woven wire mesh was incorporated as railing infill for Grove Station Tower's balcony railings by POMA Architectural Metals. To combat the local corrosive salt-water air of Florida's coastline, L-64 was woven in aluminum and then powder coated. Balcony railings for this apartment building needed to provide a sense of security while also allowing for unobstructed views of the surrounding area. Strong, durable, and reliable, Banker Wire's L-64 woven wire mesh was the perfect candidate to fill the design specifications and aesthetic requirements as the railing infill material for Grove Station Tower's balconies.
